

Namespace Aplib.Core

Classes

[Combinators](#)

Convenience class containing static methods for creating goal structures and tactics.

[LiftingExtensionMethods](#)

Contains extension methods for lifting BDI cycle components into higher-order components.

[Metadata](#)

Data structure to store information about a component which may be useful for debugging or logging.

Interfaces

[ICompletable](#)

Defines an object that can be completed.

[IDocumented](#)

Represents an object that contains general information on an instance, such as [IMetadata](#).

[IMetadata](#)

A collection of generic metadata for unique instances which should help visualize the instance with human-readable information. This metadata may be useful for debugging or logging.

Enums

[CompletionStatus](#)

Represents the state of a completable object.
